**Subject:** Annual Farm Gate Delivery Reporting Form

Manucher:

I just reviewed through the email sent out on the Water Measurement Regulation and realized the Farm Gate Reporting Form will require measurement of water use over portions of two different water years. This seems like an awkward time period for this program. If July through the Fall occurs in a dry year and then November through March is a wet year the agricultural water use could change significantly because of the availability of water. You will get an annual summary of water use but it won't match up with a typical crop water year. Why was the schedule set up this way?
